Dear specialist,

I applied for the **Software Developer** position.

Hello, I'm Irem. I'm currently a Senior Industrial Engineering student at Yıldız Technical University. I have had more than one work experience, but if I have to mention some of them, now I am working as an Associate Inventory Planner in Arçelik. Automation of the reports and optimization projects are my responsibilities.

I worked as an intern frontend developer at QNB Finansbank-Ibtech. Here, I worked on the enterprise web and mobile development team. I took part in the development of new websites, fixing some bugs by using HTML, CSS, JS, Bootstrap, SQL, React, Angular, .Net. And, in my second year of university, I worked as a project student at BSH. Here, I worked in the washing machine development planning department; my job description was the creation of bills of materials and material codes.

Solving some problems or algorithm questions with Python and Javascript amuses me a lot. I took introduction and advanced computer programming lectures in my undergraduate education. Beside the university lectures, I also studied hard to learn frontend development technologies, especially now that I am making some projects using React Redux. I'm currently studying Software Development, React, Angular, Python, Machine Learning, and SQL. I use Google, Udacity, Edx, Udemy, and Coursera to develop myself. As a curious, researcher, indomitable, and questioning Software Developer candidate,I want to be a person who adds value and makes a difference from the moment I take part in your company. I'm always working for the better. If necessary, I would like to emphasize that my current GPA is 3.18 and there are only 2 courses left in my last year, so I am ready to work full time in the software field as I am now.

I've learned Python, SQL, Angular, React, and Javascript. In addition to them, I created some data analysis projects and frontend development case studies that I found among the Youtube creators, which you can review on my GitHub profile (the URL is written on my CV).

If you find it convenient, I will be pleased to hold a meeting with you.

Best regards,
